# Unit 3 Worksheet 3 Quantitative Energy Problems Part 1 

## Energy constants ( $\mathbf{H}_{\mathbf{2}} \mathrm{O}$ )

$334 \mathrm{~J} / \mathrm{g} \quad$ Heat of fusion (melting or freezing) $\mathrm{H}_{\mathrm{f}}$
$2260 \mathrm{~J} / \mathrm{g} \quad$ Heat of vaporization (evaporating or condensing) $\mathrm{H}_{\mathrm{V}}$
$2.1 \mathrm{~J} / \mathrm{g}^{\circ} \mathrm{C} \quad$ Heat capacity (c) of solid water
$4.18 \mathrm{~J} / \mathrm{g}^{\circ} \mathrm{C} \quad$ Heat capacity (c) of liquid water
For each of the problems sketch a warming or cooling curve to help you decide which equation(s) to use to solve the problem. Keep a reasonable number of sig figs in your answers.

1. A cup of coffee ( 140 g ) cools from $75^{\circ} \mathrm{C}$ down to comfortable room temperature $20 .{ }^{\circ} \mathrm{C}$. How much energy does it release to the surroundings?
2. Suppose during volleyball practice, you lost 2.0 lbs of water due to sweating. If all of this water evaporated, how much energy did the water absorb from your body? Express your answer in kJ. $2.2 \mathrm{lbs}=1.0 \mathrm{~kg}$
3. Suppose that during the Icy Hot lab that 65 kJ of energy were transferred to 450 g of water at $20^{\circ} \mathrm{C}$. What would have been the final temperature of the water?

4. The heat capacity of solid iron is $0.447 \mathrm{~J} / \mathrm{g}^{\circ} \mathrm{C}$. If the same quantity of energy as in \#3 were transferred to a 450 g chunk of iron at $20 .{ }^{\circ} \mathrm{C}$, what would be the final temperature?
5. Suppose a bag full of ice ( 450 g ) at $0.0^{\circ} \mathrm{C}$ sits on the counter and begins to melt to liquid water. How much energy must be absorbed by the ice if $2 / 3$ of it melted?
6. A serving of Cheez-Its releases $130 \mathrm{kcal}(1 \mathrm{kcal}=4.18 \mathrm{~kJ})$ when digested by your body. If this same amount of energy were transferred to 2.5 kg of water at $27^{\circ} \mathrm{C}$, what would the final temperature be?
7. If this same quantity of energy were transferred to 2.5 kg of water at its boiling pt , what fraction of the water would be vaporized?
